1. Provide your horse with fresh clean water. Clean, readily available water is essential for good horse care.

2. Provide your horse with adequate fodder and concentrates. If feeding hay, your horse will eat approximately two to three percent of its body weight every day.

3. If supplementing, remember to add Elite Equine to one meal daily:
10g per 100kg for the first month
5g per 100kg thereafter

4. Provide adequate shelter and blanketing according to the weather.

5. Do a visual check for scrapes, cuts, bruises and puncture wounds on your horse's legs, head, and body and treat accordingly

6. Do a visual check for signs of illness such as runny eyes or noses, or sounds of coughing or wheezing.

7. Clean your horse's hooves and check for bruising or cracks, or loose shoes.

8. Muck out the stall if your horse is stabled. Ammonia from urine and manure is harmful to horses' lungs and hooves and can cause problems
